

PSPDFKIT

A drop-in-ready framework that helps in almost every aspect of PDF-rendering on iOS.

Nobody wants to wait for pages to render.
So we put a lot of work in caching.

PSPDFKit generates static images and thumbnails for your document on the fly. Once processed, it's as fast as displaying an image.
If you zoom, the pdf will be used to render a sharp image.
Best of both worlds!

Powerful examples.

Most developers learn from code. So we built great apps that work out of-the-box. PSPDFKitExample is actually based on an AppStore-App. Want to show magazines? Use it, it's a great start.

Customizable to the extreme.

You can use a modal PSPDFViewController for a great out-of-the-box experience, or change almost every aspect. Need a custom toolbar? No problem. Want to embed a pdf view inside your ViewController? Works.

We also support embedded webpages.

```
// create the PSPDFDocument (container for one or multiple pdfs)
NSString *path = [[[NSBundle mainBundle] resourcePath] stringByAppendingPathComponent:@"Sample.pdf"];
PSPDFDocument *document = [PSPDFDocument PDFDocumentWithURL:[NSURL fileURLWithPath:path]];

// open view controller
PSPDFViewController *pdfController = [[[PSPDFViewController alloc] initWithDocument:magazine] autorelease];
[self presentModalViewController:pdfController animated:YES];
